[The International Academy for Systems Research \(IASR\), an independent organization of high-qualified specialists, provide states with a unique technology for sustainable governance.](#)

Germany, December 01,2013/Free-Press-Release.com/ -- New project solutions enable a qualitatively new level of sustainable state governance. The Scientific Council of the International Academy for Systems Research (IASR) evaluated and approved the research results on the project MAPOS03* for the year 2012 and the current development of this project for the 1st half of 2013.

Scientists of IASR working on the MAPOS03 Project since 2003. They base the new development on research ideology in the fields of systems analysis, mathematical modelling and heuristics of outstanding scientists, including Nobel laureates Ginsburg, Leontief, Kantorovich.

The Scientific Council of the IASR evaluated and approved the research results of previous phases of the project MAPOS03. Competent authorities / government / ministries performed detailed evaluation of the project results and supported them.

Interested organisations and persons can request information about the project and its results from the Academy via the following email address: info@inacadem.com.

* Project MAPOS03: System development for monitoring, analysis and preparation of optimized solutions for regulative processes of functioning and development of industries, regions, social environment, economy, state policy and the world community.
